Download.Q: Linux: differences between using a proxy server vs redirecting browser requests I have a setup of my desktop in my home where I can't get to work, and finally I was wondering if there is any difference in using a proxy server vs a DNS redirect in order to make it work. My setup is this: 1) My computer is connected to a router through wifi. 2) There is an ADSL modem connected through ethernet to the router. 3) The router has a DNS server set up with just a fixed IP, and it is set to forward all requests with the destination * to the modem's public IP address. 4) The router and the ADSL modem have been set up through a static IP setting. 5) I access all the internet by using my laptop, which is connected to the router via ethernet cable. 6) I have opened all the ports on my router. What I don't understand is, why is it that if I set my browser to use a proxy server, in the list of options (eg. About 6d1f23a050
